

# MOSQUITO CONTROL CHECKLIST

- Mosquitoes need standing water to lay their eggs.
- Look for anything that can hold water for more than 3 days
- Dump and drain the water once a week: Empty and scrub, turn over, cover, or throw away all items that hold water.
- Tightly cover water storage containers, so that mosquitoes can't get inside to lay eggs. Rain barrels must be tightly sealed at all entrances with 1/16th inch wire mesh and checked regularly.
- Check inside and outside your home.
